

Basic IV Clinical Skills

Instructor: Krystal Pendergraft-Horne, DNP, RN, FNP-C

Length: 3 hours

Program Description: The IV Skills Workshop is designed to provide participants with a comprehensive understanding of the essential techniques and principles involved in intravenous (IV) therapy. This hands-on workshop aims to equip healthcare professionals with the necessary skills to confidently and proficiently perform IV insertions while ensuring patient safety and optimal care.

Learning Objectives: At the end of this program, participants will be able to:

- Review the importance of IV therapy in patient care and familiarize yourself with the basic components of IV equipment.
- Discuss the step-by-step process of safely and effectively inserting an IV catheter, including site selection, vein palpation, and aseptic technique.
- Explore best practices for maintaining IV catheters to minimize the risk of complications, including infection control and site care.
- Enhance your skills through practical, interactive sessions where you will have the opportunity to apply your knowledge in a controlled and supervised environment.

Audience:

RNs, LPNs, NPs, Physicians, PAs, Residents, Paramedics, RN Refresher Nurses, and all other healthcare professionals interested and licensed to administer IVs
