

Brainstorms and Emergencies: Navigating Acute Neuro Without Losing Your Mind

Instructor: Meg Zomorodi, PhD, RN, ANEF, FAAN

Length: 3 hours [Program can be expanded or shortened depending on needs]

Program Description: This program will provide the learner with neurological assessment skills as well as the ability to plan, intervene in and evaluate the care of the patient with acute neurological emergencies. Topics will include neuro anatomy, intracranial pressure management, traumatic brain injury, and other acute conditions will be discussed with special attention to updated treatments and future trends.

Learning Objectives: At the end of this program, participants will be able to:

- Review cranial anatomy, cerebral circulation, and the general organization of the brain.
- Apply the elements of the nursing process to the care of the patient with acute neurological deficits.
- Identify signs and symptoms associated with increased intracranial pressure

Audience:

Primary audience is RNs and LPNs. The program may be modified for Nursing Assistants
